AI Business Value Dashboard Tracking the AI Journey

This dashboard measures AI adoption across **3 dimensions of fluency**. As users mature, the type of work AI performs evolves — from answering questions to producing deliverables and unlocking specialist expertise. The extent of this progression determines the time saved and value delivered.

USER MATURITY

How deeply are users engaging with AI?

Beginner — Tries AI occasionally for simple tasks

Developing — Uses AI regularly across multiple workflows

Proficient — AI is embedded in how they work every day

Progression is measured by **task breadth, frequency,** and **agent adoption**.

VALUE MATURITY

What type of value is AI delivering?

Asking — Quick answers. Low value per task.

Finding — Search and retrieval. AI as a better search engine.

Consuming — Summaries and triage. AI digests content .

Producing — Deliverables, analysis, specialist work. High value per task.

Automating — Agents run workflows end-to-end. Frontier Firm maturity.

Progression from **Asking** to **Producing** represents a **10x increase** in value per AI task.

SKILLS AUGMENTATION

What professional expertise is AI unlocking?

AI acts as **specialist roles** users don't ordinarily have access to —

Data Analyst, Software Engineer,
Business Analyst, Compliance Specialist,
Sales Consultant, IT Support Specialist,
HR Specialist, Coach,
Technical Writer, Automation Engineer,
Research Analyst, Domain Expert.

Measured by the **distinct expert roles AI performs** and the equivalent hours of specialist capacity delivered.

HOW VALUE IS CALCULATED

Every Copilot interaction generates an audit signal — what app was used, what resources were accessed, what actions were taken. Each signal is classified into an **AI Task** (e.g., Email Drafting, Data Querying, Meeting Prep). Each task maps to a **Value Category**: either **Time Saved** (how much faster the work gets done) or **Augmented Skill** (specialist expertise AI provides that the user doesn't have). Each task carries a research-sourced human time baseline — the hours a person would spend doing that work manually. The sum of these baselines is the **Hours Saved**. Multiply by an average hourly rate to get the **Assisted Value** — the dollar return on your AI investment.

Signal → AI Task → Hours Saved / Augmented Skill → **Assisted Value**

SIGNAL TO VALUE - TABLE

Signal	AI Tasks	Augmented Skill	Use Case	Value Outcome	Assisted Time Mins. (Human Equivalent)	Research Source - Time Savings
AppHost=Designer OR png/jpg/svg + Active	Image Generation	Graphic Design	Marketing visuals, presentations, social content	Content Output	60	Adobe (2022); Content Marketing Institute (2023)

User Maturity Stages

1: Beginner — <3 behavior types, no agents, <6 active days. General chat, web search, simple Q&A. AI is a curiosity, not yet a tool.

2: Developing — 3+ behaviour types AND 3+ active days. Consistent, multi-workflow use. AI is becoming part of the routine — email, documents, meetings.

3: Proficient —5+ behaviors AND agents or 8+ active days. Data analysis, content creation, enterprise search, specialist agents. AI is habitual across multiple surfaces.

Agent Features (Legend)

- in Teams = Available in Microsoft Teams
- in Outlook = Available in Outlook
- in Office = Available across Microsoft 365 apps
- SharePoint = Can access SharePoint sites and files
- OneDrive = Can access OneDrive files and folders
- Graph = Can extend to Microsoft Graph connectors
- Files = Contains uploaded files or documents

Agent Review (Legend)

- **New** = Created within 14 days. Give them time to gain adoption.
- **High Impact** = Active within 30 days with strong user adoption and broad organisational reach. Prioritise and champion these agents.
- **Keep** = Active within 30 days or has strong user engagement. Continue supporting these agents.
- **Review** = Inactive 30+ days with low usage, or created 14-90 days ago but never adopted. Monitor closely.
- **Dormant** = Inactive 90+ days with minimal users. Consider removal.
- **Never Used** = Created 14+ days ago but has never been used. Investigate or remove.
